Pharmacy Fixtures Monaco Prescription Retrieval System

How much time are you wasting looking for prescriptions when the patient arrives to pick them up? What image are you projecting with bins and boxes full to overflowing with prescription bags waiting for pick-up? Do you really want to put up with a poorly organized or messy prescription holding area? The Prescription Retrieval System can solve your storage and organization problems quickly and easily and it won't cost you a bundle!

Monaco Bags

The Monaco Bags are extremely durable and available in many sizes. They are made of a tough, clear 4 mil. plastic with a built in sturdy plastic handle.

12 Rods (32"W)

24 Brackets

8 Wall Standards

ITEM NUMBER: 60-022

3 Rods (48"W)

6 Brackets

2 Wall Standards

Manrex Limited® is proud to be a Canadian agent for Sintek pharmacy fixtures and one of our consultants can give you details on how it can effectively increase your storage volume, improve inventory access and efficiency.

Carrousel

Carrousel is a revolution in Canadian pharmacy; not only in concept, but also in the way it delivers product to the pharmacy. The freestanding revolving Carrousel makes inventory retrieval easy with its horizontal revolving shelves and sloping inventory control system. Each shelf turns smoothly, silently, and independently of the others.

A Carrousel 180 puts 50 meters of shelving at your fingertips without taking a single step. In addition, Carrousel packs a large volume of inventory, clearly organized, into a very small area. Offered in two sizes, the 110 and 180 allow you to select the volume of storage you need within your space requirements.

Rombic

Rombic is a unique way of storing smaller pharmaceutical bottles, ointments and creams and other single use items. With its vertical banks of self-closing drawers, Rombic maximizes your storage space while providing a striking and professional visual appearance. Rombic drawers slope towards the person selecting products so all labels are visible and easily read. In addition, this forward slope also guarantees a constant "first in, first out" inventory rotation.

Rombic drawers use double expansion runners, which means the whole drawer is accessible, right to the very back. They can be ordered with left hand opening, right hand opening, or a combination of both. Rombic also includes a built-in adjustable partitioning system which keeps your products neat, organized and in place for ease of use.
